## COMUNICAT

04.10.2011

In luna septembrie 2011 a fost finalizat proiectul „PROMOVAREA TEHNOLOGIILOR VERZI BAZATE PE PROCEDEE DE OXIDARE FOTOINDUSE IN TRATAREA APELOR CU CONTINUT DE PESTICIDE” coordonat de Institut National de Cercetare-Dezvoltare pentru Ecologie Industriala-ECOIND si avand ca partener compania de apa S.C. SECOM S.A.

Obiectivul general al proiectului, desfasurat in perioada 2008-2011, a fost aprofundarea cunostintelor privind degradarea avansata a unor pesticide prin aplicarea unui procedeu photocatalitic de oxidare avansata, care utilizeaza lumina solara ca sursa de radiatii UV-VIS, asociat cu separarea recuperativa prin flotatie a fierului, catalizator in procesul de degradare.

O scurta prezentare a proiectului si a activitatilor de cercetare este disponibila pentru consultare, in format tiparit, in cadrul bibliotecii ARA.

## COMMUNIQUE

In September 2011 was finalized the project entitled "Promotion of photo-induced based green technologies for the treatment of water with pesticides content", coordinated by National Research and Development Institute for Industrial Ecology-INCD ECOIND and having as partner the water company S.C. SECOM S.A.

The general objective of the project, developed in 2008-2011 period, was to gain better knowledge on advanced degradation of pesticides, applying a photo-catalytic advanced oxidation technique, which uses solar light as UV-VIS irradiation source and recuperative separation by flotation of iron which is catalyst in the degradation step.

A short presentation of the project and research activities performed is available in a printed format at ARA library.
