▶ STREAM - Research Module

STREAM e-Learning course: 2nd module on Research. REGISTRATION IS STILL OPEN UNTIL 24th of February

Registration to the 2nd module of STREAM e-Learning Course on Research is open [HERE](#) until the 24th of February.

Following the Policy module with more than 50 registered participants, the STREAM e-Learning Course, now continues with the 2nd Module focused on Research results of EU funded projects.

Through a very practical approach, this online course is addressed to three main categories of actors involved in water technology, research and management issues: policy makers, researchers and technicians/managers/entrepreneurs in companies active in the water sector.

The focus of this module is to give a concise overview and update of research results in the field of reducing water consumption and using water resources in a sustainable way. The course will allow to investigate possible impacts of those research results on the activities of policy makers, researchers and SMEs.

Research projects are divided in 6 categories/topics in which participants can find updates on research results:

- ▶ Surface Water
- ▶ Ground Water
- ▶ Storm Water
- ▶ Drinking Water
- ▶ Waste Water
- ▶ Marine Water

The STREAM e-learning course provides an interactive platform for module participants and projects' coordinators. Participants will work collaboratively in groups by drafting documents to reflect and discuss the impacts that these results can have on their professional activities.

Eligible participants are professionals from the water domain and fluent in written English. To register, please fill in the online form [HERE](#). For further details, please visit the [e-Learning Platform](#) section on the STREAM website.

Calendar

<< February 2012 >>						
S	M	T	W	T	F	S
